

ATLAS OF TRANS-OESOPHAGEAL ECHOCARDIOGRAPHY

DEEPAK K. TEMPE, MD

*Prof. & Head, Department of Anaesthesiology & Intensive Care
G.B. Pant Hospital (University of Delhi)*

PARTHO P. SENGUPTA, MD, DM

*Post-doctoral Research Fellow, Division of Cardiovascular Disease and
Internal Medicine, Mayo Clinic, Rochester, MN. USA*

KEY SELLING POINTS

- ◆ Over 80 colour and 160 black and white high quality images
- ◆ Illustrates *normal* and *abnormal* images
- ◆ Excellent value for money

BOOK INFORMATION

Price: £ 30.00
ISBN: 1 904798 233
Pub Date: January 2005
Format: Hardback
Extent: 176 pages

Trans-oesophageal Echocardiography (TOE) is being increasingly used inside the operating room. The anaesthesiologist is expected to not only perform the TOE examination but understand and interpret the images. Although TOE provides crisp, clean and detailed images, it is not easy to interpret them, especially for the anaesthesiologist who is not used to echocardiography. Well defined training for and experience with the technique is necessary. This atlas will go a long way in fulfilling this objective.

This atlas contains clearly presented illustrations of the *normal* as well as the commonly encountered *abnormal images*, with an emphasis on their quality and concise explanations. These images relate to all valvular and congenital lesions, as well as several other aspects, such as masses, thrombi, and prosthetic valves. There is also a discussion of the principles of echocardiography.

It comes in a handy size format so that it can be carried for ready reference, and it is intended for use not only for the trainee anaesthesiologist, but trainee cardiologists and cardiac surgeons will also find it useful.

Contents: Principles of echocardiography; Cardiac assessment; Evaluation of the left ventricular function; Evaluation of the mitral valve; Evaluation of the aortic valve; Evaluation of the right side of the heart; Evaluation of the prosthetic valve function; Assessment of cardiac vegetations; Evaluation of congenital heart disease; Evaluation of the intra-cardiac masses and prosthetic materials; Evaluation of the aorta;
